

PRESS RELEASE MARCH THE 6TH 2020

CHANGE IN BOTTLE CAPS FOR DISINFECTANT HAND RUBS

EXCEPTIONAL SITUATION CAUSED BY THE CORONA VIRUS

The corona virus epidemic (COVID-19) poses a severe challenge to the availability of packaging materials, and therefore we have had to make some temporary changes.

We want to ensure that important products and packaging sizes can be kept on the market for as long as possible. We have also prioritised health care customers in order deliveries.

There are currently problems in availability with some of the components used in hand disinfectant packaging. At the moment, the most difficult situation is with the pump for 500 ml bottles. In our procurement and product development, we carry out reporting work so that gaps can be quickly filled.

To ensure the continued availability of important products, we have made a decision to temporarily prepare some 500 ml bottle-packed products with a press-top cap.

These products are:

8251 Erisan Käsihuuhde 500 ml, GTIN 6438160082514

8060 Käsideksi 500 ml, GTIN 6417964080605

63026 Erisan Etasept 500 ml, GTIN 6417964630268

With these measures, we want to ensure that all pack sizes of our hand hygiene products can still be put on the market and prevent the spread of pathogens by hand. If desired, the pump of an empty disinfectant hand rub bottle can be safely used with the new 500 ml bottle to replace the press-top cap.

We hope that our disinfectant hand rub in 500 ml bottles with a press-top cap will be suitable for you, temporarily, in this force majeure situation.

Best regards,
KiiltoClean Oy
