Long-lasting cleanliness

with Kiilto's probiotic cleaning agents

Our environment is full of invisible life, different microbes are almost everywhere. We aim to reduce harmful microbes from surfaces by cleaning them. Beneficial microbes such as probiotics, on the other hand, help maintain healthy premises.

Probiotic cleaning agents add probiotics to the surface during daily cleaning, which continue to remove dirt and odours between cleaning times as well. Probiotics multiply on the surface, displacing harmful microbes such as pathogens.

A DOUBLE EFFECT WITH PROBIOTICS – INSTANT & LONG-TERM CLEANING

With the help of probiotic cleaning agents, a double effect is achieved: the dirt-removing ingredients of the product work immediately and the probiotics remain to do the cleaning work in the longer term.

Probiotics produce a wide range of enzymes that break down the dirt into smaller particles, so the probiotics are better able to use the dirt for food, and at the same time, the dirt is easier to remove from the surfaces during cleaning.

Kiilto's probiotics cleaning solution is suitable for daily cleaning a variety of environments, including schools, day care, hotels, toilets, hospitals and nursing homes. It caters to a broad spectrum of customers and is formulated for effective cleaning of surfaces.

KIILTO PRO PROBIOTIC SOLUTIONS FOR THE PROFESSIONAL CLEANING & FOOD SERVICE

It is recommended to shake all the probiotic products before use. Prepare a solution for one day's use. Recommended method is moist wiping. Do not rinse with water after cleaning. After using strong alkaline or acidic agents, the initial treatment must be repeated. Please note that probiotic products are not recommended for use on surfaces that come into direct contact with food.

All-purpose cleaner

KIILTO PRO UNIVERSAL PROBIO

An effective, probiotic all purpose cleaner. Cleans hard surfaces as a universal cleaner, while leaving beneficial, probiotic microbes on surfaces for prolonged impact.

The use of the Kiilto Pro Universal Probio product is always started with an initial treatment dose, which can be repeated if necessary. After the initial treatment, daily cleaning dosage is used regularly.

- **Initial and one-time treatment:** dosage 30 ml / 1 l of water
- **Daily cleaning:** dosage 10 ml / 1 l of water

Kiilto
PRO

Kiilto's solution **for** **probiotic cleaning**

Kiilto Pro probiotic products contain a versatile mix of probiotics that are very active in the production of enzymes, enabling them to tackle a wide range of organic dirt.

The products are a result of through research and testing:

- The probiotics contained in the products are safe, they are naturally occurring GMO-free microbes and meet the Nordic Swan Ecolabel criteria
- Regular utilization results to safer and healthier surfaces with probiotic microbes
- Probiotics weaken the existing **biofilms and prevent the formation of new ones**
- Because of the natural origin of probiotics, they integrate well into a natural microbial ecosystem and will help to restore and maintain a healthy natural microflora in the environment
